

Server Consolidation & Disaster Recovery

“The efficiency and reliability of the blade server, combined with the exceptional support of the Dynamix Group, gave us the freedom to be out of town during the system test!”

- Director of IT, Telecommunications Company

SUCCESS STORY

Simplified Data Backup and Recovery processes are implemented with an IBM Blade Server in conjunction with an IBM System i520 at a small community telecommunications company.

CLIENT NEED

For a busy telecommunications company, the server backup and recovery process was a tedious undertaking for network administrators tasked with ensuring the company with uninterrupted and convenient access to network data.

DYNAMIX GROUP SOLUTION

Dynamix Group implemented the IBM System i520 with the integrated IBM BladeCenter to create layers of data redundancy needed to improve data management and ensure data backup reliability. Additionally, the IBM BladeCenter was a cost effective solution because it reduced the manpower needed to manage the system. The BladeCenter also left a port vacant on the KVM switch, freeing valuable data space. The new BladeCenter not only solved the issues surrounding data backup and recovery, but it also increased overall server efficiency.

THE RESULT

A better night's sleep and more vacation relaxation.

PRODUCTS/SERVICES

- IBM System i520 (with IBM iSCSI Attachment)
- IBM BladeCenter
- Dynamix Group Technical Services
