

Simplify your security architecture with adaptable and flexible solutions.

Special No-Charge Security Offering

Dynamix, in conjunction with Tech Data and Cisco, introduces an innovative approach to threat defense that reduces complexity while gaining superior visibility, consistent control and advanced threat protection across the entire attack continuum.

Our Approach

Dynamix will place a loaner Cisco ASA 5506X at your location for two weeks. The ASA acts as a sensor collecting data and sends it to a FireSight Management Center instance that is in the Cisco dCloud.

What We Deliver

After the two-week period is over, a risk report is generated and sent to us to review with you. The report will identify risks and vulnerabilities in your IT network.

Immediate Benefits

Visibility: Have a better understanding of the types of devices on your network and the applications they are running.

Threat Detection: Identify bad actors in your environment and the threat that they pose to other internal systems.

Automation: Reduce the strain on your security analysts while arriving at a faster resolution of intrusion information.

New Security Actions You Can Take

Access: Deploy a reputation service that helps to limit traffic to known bad websites and actors on the Internet.

Malware Detection: Implement network malware detection with file reputation, sandboxing and retrospection.

File Blocking: Have clear visibility of file types entering your environment with the capability to block files before an attack by type, protocol or transfer direction.

Application Control: Gain granular control of applications that help maximize productivity and reduce the attack surface.

Cross-Product Integration: Use the eStreamer API to share host and event data with 3rd partner applications such as SIEM and integrate with systems such as Cisco ISE.

The Dynamix Difference

Dynamix has an integrated, comprehensive approach to security—from people and data to applications and infrastructure. With increased visibility and threat detection our offerings can help you isolate malicious code and respond to threats more effectively.
